

# GMP APC anti-human CD16 Antibody

Catalog# / Size	260050 / 100 tests
Clone	3G8
Workshop	V NK80
Other Names	FcγRIII, Fc gamma receptor, Fc gamma receptor 3
lsotype	Mouse IgG1, κ
Description	CD16 is known as low affinity IgG receptor III (FcγRIII). It is expressed as two distinct forms (CD16a and CD16b). CD16a (FcγRIIIA) is a 50-65 kD polypeptide-anchored transmembrane protein. It is expressed on the surface of NK cells, activated monocytes, macrophages, and placental trophoblasts in humans. CD16b (FcγRIIIB) is a 48 kD glycosylphosphatidylinositol (GPI)-anchored protein. Its extracellular domain is over 95% homologous to that of CD16a, and it is expressed specifically on neutrophils. CD16 binds aggregated IgG or IgG-antigen complex which functions in NK cell activation, phagocytosis, and antibody-dependent cell-mediated cytotoxicity (ADCC).

## **Product Details**

Reactivity	Human				
Antibody Type	Monoclonal				
Host Species	Mouse				
Immunogen	Human PMN cells				
Formulation	Phosphate-buffered solution, pH 7.2, containing 0.09% sodium azide and 0.2% (w/v) BSA (origin USA).				
Preparation	The antibody was purified by affinity chromatography, and conjugated with APC under optimal conditions.				
Concentration	100 μg/mL				
Storage & Handling	The CD16 antibody solution should be stored undiluted between 2°C and 8°C, and protected from prolonged exposure to light. <b>Do not freeze.</b>				
Application	FC - Quality tested				
Recommended Usage	Each lot of this antibody is quality control tested by <u>immunofluorescent staining with flow cytometric</u> <u>analysis</u> . For flow cytometric staining, the suggested use of this reagent is 5 $\mu$ L per million cells in 100 $\mu$ L staining volume or 5 $\mu$ L per 100 $\mu$ L of whole blood. It is recommended that the reagent be titrated for optimal performance for each application.				
Excitation Laser	Red Laser (633 nm)				
Application Notes	The 3G8 antibody clone blocks neutrophil phagocytosis and stimulates NK cell proliferation. It has been reported that this clone interacts with the $Fc\gamma RIIa$ and $Fc\gamma RIIIb$ receptors causing neutrophil activation and aggregation <sup>18</sup> . Due to this phenomenon staining in whole blood may cause a reduction in the number of granulocytes or alter their scatter profile.				
	Additional reported applications (for the relevant formats) include: immunohistochemical staining of acetone-fixed frozen tissue sections <sup>6</sup> , immunoprecipitation <sup>3</sup> , stimulation of NK cell proliferation <sup>4</sup> , blocking of phagocytosis <sup>5</sup> , and blocking of immunoglobulin binding to $Fc\gamma RIII^{7,8}$ . The Ultra-LEAF $m$ purified antibody (Endotoxin < 0.01 EU/µg, Azide-Free, 0.2 µm filtered) is recommended for functional assays (Cat. No. 302049, 302050, 302057, 302058).

#### Disclaimer

**GMP RUO Flow Cytometry Antibodies.** BioLegend GMP RUO fluorophore conjugated antibodies are manufactured in a dedicated GMP facility and compliant with ISO 13485:2016. For research use only. Not for use in diagnostic or therapeutic procedures. Our processes include:

- Batch-to-batch consistency
- Material traceability
- Documented procedures
- Documented employee training
- Equipment maintenance and monitoring records
- Lot-specific certificates of analysis
- Quality audits per ISO 13485:2016
- QA review of released products

#### **Antigen Details**

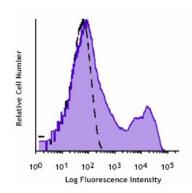

Structure	lg superfamily, transmembrane form (50-65 kD) or GPI-linked form (48 kD)
Distribution	NK cells, activated monocytes, macrophages, neutrophils
Function	Low affinity IgG Fc receptor, phagocytosis, ADCC
Ligand/Receptor	Aggregated IgG, IgG-antigen complex
Cell Type	Dendritic cells, Macrophages, Monocytes, Neutrophils, NK cells
Biology Area	Immunology, Innate Immunity
Molecular Family	CD Molecules, Fc Receptors
Antigen References	<ol> <li>Fleit H, et al. 1982. P. Natl. Acad. Sci. USA 79:3275.</li> <li>Stroncek D, et al. 1991. Blood 77:1572.</li> <li>Wirthmueller U, et al. 1992. J. Exp. Med. 175:1381.</li> </ol>
Gene ID	2214
