

## PE/Dazzle™ 594 anti-mouse CD206 (MMR) Antibody

<b>Catalog# / Size</b>	141731 / 25 µg 141732 / 100 µg
<b>Clone</b>	C068C2
<b>Regulatory Status</b>	RUO
<b>Other Names</b>	MMR (macrophage mannose receptor), MR (mannose receptor), MRC1
<b>Isotype</b>	Rat IgG2a, κ
<b>Description</b>	CD206, also known as mannose receptor (MR), is a 175 kD type I membrane protein. It is a pattern recognition receptor (PRR) belonging to the C-type lectin superfamily. MR is expressed on macrophages, dendritic cells, Langerhans cells, and hepatic or lymphatic endothelial cells. MR recognizes a range of microbial carbohydrates bearing mannose, fucose, or N-acetyl glucosamine through its C-type lectin-like carbohydrate recognition domains, sulfated carbohydrate antigens through its cysteine-rich domain, and collagens through its fibronectin type II domain. MR mediates endocytosis and phagocytosis as well as activation of macrophages and antigen presentation. It plays an important role in host defense and provides a link between innate and adaptive immunity. Recently, MR on lymphatic endothelial cells was found to be involved in leukocyte trafficking and a contributor to the metastatic behavior of cancer cells. It suggests that MR may be a potential target in controlling inflammation and cancer metastasis by targeting the lymphatic vasculature.

### Product Details

<b>Verified Reactivity</b>	Mouse
<b>Antibody Type</b>	Monoclonal
<b>Host Species</b>	Rat
<b>Immunogen</b>	Recombinant mouse CD206 (MMR)
<b>Formulation</b>	Phosphate-buffered solution, pH 7.2, containing 0.09% sodium azide.
<b>Preparation</b>	The antibody was purified by affinity chromatography and conjugated with PE/Dazzle™ 594 under optimal conditions.
<b>Concentration</b>	0.2 mg/ml
<b>Storage &amp; Handling</b>	The antibody solution should be stored undiluted between 2°C and 8°C, and protected from prolonged exposure to light. <b>Do not freeze.</b>
<b>Application</b>	<a href="#">ICFC - Quality tested</a> <a href="#">FC - Verified</a>
<b>Recommended Usage</b>	Each lot of this antibody is quality control tested by <a href="#">intracellular immunofluorescent staining with flow cytometric analysis</a> . For flow cytometric staining, the suggested use of this reagent is ≤0.5 µg per million cells in 100 µl volume. It is recommended that the reagent be titrated for optimal performance for each application.  * PE/Dazzle™ 594 has a maximum excitation of 566 nm and a maximum emission of 610 nm.
<b>Excitation Laser</b>	Blue Laser (488 nm) Green Laser (532 nm)/Yellow-Green Laser (561 nm)
<b>Application Notes</b>	Clone C068C2 recognizes a region similar to clone MR5D3, based on the ability of the clones to block each other. Additional reported applications (for the relevant formats) include: spatial biology (IBEX) <sup>4,5</sup> .

AB\_2565932 (BioLegend Cat. No. 141732)

## Antigen Details

---

<b>Structure</b>	Type I transmembrane protein, 175 kD, C-type lectin superfamily
<b>Distribution</b>	Macrophages, dendritic cells, Langerhans cells, liver endothelial cells
<b>Function</b>	Pathogen recognition, endocytosis and phagocytosis, antigen presentation
<b>Ligand/Receptor</b>	Antigen containing mannose, fucose, or an N-acetyl glucosamine
<b>Cell Type</b>	Dendritic cells, Endothelial cells, Langerhans cells, Macrophages
<b>Biology Area</b>	Cell Biology, Immunology, Innate Immunity, Signal Transduction
<b>Molecular Family</b>	CD Molecules
