

APC/Fire™ 750 anti-human CD117 (c-kit) Antibody

Catalog# / Size 313239 / 25 tests

313240 / 100 tests

RUO

Clone 104D2

Other Names Stem cell factor receptor, c-kit, mast cell growth factor receptor, steel factor receptor

Mouse IgG1, κ Isotype

Description CD117 is a 145 kD protein tyrosine kinase also known as c-Kit. It is a receptor for stem cell

factor or c-Kit ligand. CD117 is expressed on pluripotent hematopoietic progenitor cells (approximately 1-4% bone marrow cells), mast cells, and acute myeloid leukemia cells (AML). CD117 binding of c-Kit ligand induces phosphorylation of CD117 and stimulates proliferation and survival of primitive hematopoietic stem cells as well as erythroid-committed and granulo-

monocytic committed cells.

Product Details

Regulatory Status

Verified Reactivity Human

Reported Reactivity Cynomolgus, Cow

Monoclonal **Antibody Type Host Species** Mouse

Immunogen MOLM-1 megakaryocytic cell line

Formulation Phosphate-buffered solution, pH 7.2, containing 0.09% sodium azide and BSA (origin USA)

Preparation The antibody was purified by affinity chromatography and conjugated with APC/Fire™ 750 under

optimal conditions.

Concentration Lot-specific (to obtain lot-specific concentration, please enter the lot number in our Concentration

and Expiration Lookup or Certificate of Analysis online tools.)

Storage & Handling The antibody solution should be stored undiluted between 2°C and 8°C, and protected from

prolonged exposure to light. Do not freeze.

Application FC - Quality tested

Recommended Usage Each lot of this antibody is quality control tested by immunofluorescent staining with flow cytometric

analysis. For flow cytometric staining, the suggested use of this reagent is 5 µl per million cells in

100 µl staining volume or 5 µl per 100 µl of whole blood.

* APC/Fire™ 750 has a maximum excitation of 650 nm and a maximum emission of 787 nm.

The 104D2 antibody does not block binding of c-Kit ligand. Additional reported applications (for the Application Notes

relevant formats) include: immunoprecipitation¹, immunofluorescence microscopy¹, and spatial biology (IBEX)^{4,5}.

Antigen Details

Structure Growth factor receptor with tyrosine kinase activity, subclass III, approximately 145 kD

Distribution Pluripotent hematopoietic progenitor cells (approximately 1-4% bone marrow cells), mast cells,

acute myeloid leukemic cells (AML)

Function Growth factor receptor for stem cell factor. Induces proliferation and survival of primitive

hematopoietic progenitors. Potent inducer of proliferation in erythroid-committed progenitor cells. Defects in CD117 have been linked to severe anemia and a decreased number of hematopoietic

progenitor cells.

Ligand/Receptor c-Kit ligand

Modification Multiple phosphorylation sites

Cell Type Embryonic Stem Cells, Hematopoietic stem and progenitors, Leukemia, Mast cells, Mesenchymal

Stem Cells

Biology Area Immunology, Stem Cells

Molecular Family CD Molecules
