

Alexa Fluor® 660 anti-human CD314 (NKG2D) Antibody

Catalog# / Size	320841 / 25 tests 320842 / 100 tests
Clone	1D11
Regulatory Status	RUO
Other Names	NKG2D
Isotype	Mouse IgG1, κ
Description	CD314 is a homodimeric C-type lectin-like protein also known as NKG2D. It is expressed on NK cells, CD8 ⁺ T cells, γ/δ T cells, and <i>in vitro</i> induced LAK cells. Several molecules have been identified as the ligands for NKG2D, including MHC class-I chain-related protein A (MICA), MICB, and UL16-binding proteins (ULBPs). NKG2D has no intrinsic signaling capacity, but attains this by non-covalent association with DAP10 or DAP12 adaptors. In addition to being a primary activation receptor on NK cells, NKG2D is also a costimulatory receptor for TCR-mediated T cell proliferation and cytokine production. The interaction of NKG2D with its ligands plays a role in the immune surveillance against pathogen and tumor cells, and in the pathogenesis of autoimmune diseases.

Product Details

Verified Reactivity	Human
Reported Reactivity	African Green, Baboon, Cynomolgus, Rhesus
Antibody Type	Monoclonal
Host Species	Mouse
Formulation	Phosphate-buffered solution, pH 7.2, containing 0.09% sodium azide and BSA (origin USA)
Preparation	The antibody was purified by affinity chromatography and conjugated with Alexa Fluor® 660 under optimal conditions.
Concentration	Lot-specific (to obtain lot-specific concentration, please enter the lot number in our Concentration and Expiration Lookup or Certificate of Analysis online tools.)
Storage & Handling	The antibody solution should be stored undiluted between 2°C and 8°C, and protected from prolonged exposure to light. Do not freeze.
Application	FC - Quality tested
Recommended Usage	Each lot of this antibody is quality control tested by immunofluorescent staining with flow cytometric analysis . For flow cytometric staining, the suggested use of this reagent is 5 μ L per million cells in 100 μ L staining volume or 5 μ L per 100 μ L of whole blood. It is recommended that the reagent be titrated for optimal performance for each application. * Alexa Fluor® 660 has an excitation maximum of 663 nm, and a maximum emission of 690 nm. Alexa Fluor® and Pacific Blue™ are trademarks of Life Technologies Corporation. View full statement regarding label licenses
Excitation Laser	Red Laser (633 nm)
Application Notes	The 1D11 antibody blocks MICA binding to T cells, induces redirected lysis, and costimulates T cells activation and proliferation. Additional reported (for the relevant formats) applications include: immunoprecipitation ^{1,2} , blocking of ligand binding, induction of redirected cell lysis, and costimulation of T cells proliferation ²⁻⁷ . For highly sensitive assays, we recommend Ultra-LEAF™ purified antibody (Cat. No. 320814) with endotoxin < 0.01 EU/ μ g, Azide-Free, 0.2 μ m filtered.

Antigen Details

Structure	C-type lectin
Distribution	NK cells, γ/δ T cells, CD8 ⁺ T cells
Function	Cytolytic killing of target cells expressing NKG2D ligands, costimulation of NK cells and T cells
Ligand/Receptor	MICA, MICB, UL16-binding proteins (ULBPs)
Cell Type	NK cells, T cells
Biology Area	Costimulatory Molecules, Immunology
Molecular Family	CD Molecules
